## PETROLEUM EXPLORATION OPPORTUNITIES IN GUYANA

Exploration companies will be invited to apply for petroleum exploration licences in the Co-operative Republic of Guyana in 1986. There are two main sedimentary areas: The Guyana Basin is a passive margin basin extending across the continental shelf (see Petroleum Potential of Offshore Guyana" 9th December 1985 issue Oil & Gas Journal). The Takutu Basin is an intracratonic 'pull-apart' basin which straddles the Guyana-Brazil border. Reports detailing the petroleum potential of the respective basins are available for purchase together with data packages containing seismic and well data

A presentation of the petroleum prospectivity and a new legislative/economic framework will be given at seminars in London and Houston on 11th and 18th February 1986.
Following the seminars Guyana Government officials will be available to meet privately with interested companies.

To receive a free Promotional Document and an invitation to the Seminars contact either.
